

Player1 is always the starting player. Players are selected as P1 and P2 at random

Match.Status can be:

- 0: Abandoned (Only occurs if both players have left the game in a short time period. Probably a server-side error)
- 1: P1 Won
- 2: P2 Won
- 3: In Progress
- 4: Placing Ships
- 5: Waiting / Loading

Leaderboard can be added as a view in SQL code

User.Role is eliminated in favor of boolean type IsAdmin

There should be a check to prevent Admin players from spectating their own matches and banning their opponents

In PlayerStats table, UserID(FK) and SeasonNo combination should be UNIQUE. So, we can store stats for each player for each season separately.
